

Skin Care Policy

As Australia is a country with a high rate of skin cancer, it is important to educate the children about the effects of the sun and promote habits to avoid skin damage.

Aims:

- to raise awareness in children of the damages of UV rays to their skin
- to instil in children lifelong habits to avoid skin damage

Implementations:

- teachers will educate students about the effects of UV rays on their skin
- parents may supply their children with their own sunscreen
- teachers will remind students to wear hats
- students who do not wear a hat will be asked to stay in a sheltered area
- students who are constantly not wearing their hats will be given a standard letter to inform parents that their child is not wearing a hat
